AERONAUTICAL RADAR SURVEILLANCE ALTERNATIVES

WHEREAS the development of airports and increase in air traffic in Western Colorado has been substantial over the past 20 years, and

WHEREAS most airports in Western Colorado do not have radar equipment, and for those few that do, this increase in air traffic has exceeded the capacity limits of their radar equipment resulting in increased safety concerns and reduced air traffic capacity, and

WHEREAS, if we can increase the air traffic capacity at Western Colorado’s airports, this will create economic and lifestyle benefits for all Western Colorado residents;

THEREFORE BE IT RESOLVED that Club 20 supports the efforts of the State of Colorado Division of Aeronautics to encourage the Federal Aviation Administration to review, approve, and fund the installation of alternative aeronautical radar surveillance equipment at Colorado mountain airports in order to enhance aviation safety and aircraft operations efficiency.
